

The Ledger of Things

2022/07/16

# Platform

The Ledger of Things is a revolutionary open source Layer 1 blockchain platform for the tokenization of objects. Proof of Scan is a decentralized protocol, which is based on recognition technology. This will **prevent the copying of digital assets** and thus open a door for the entire blockchain space to potentially trillions in deals all over the globe.

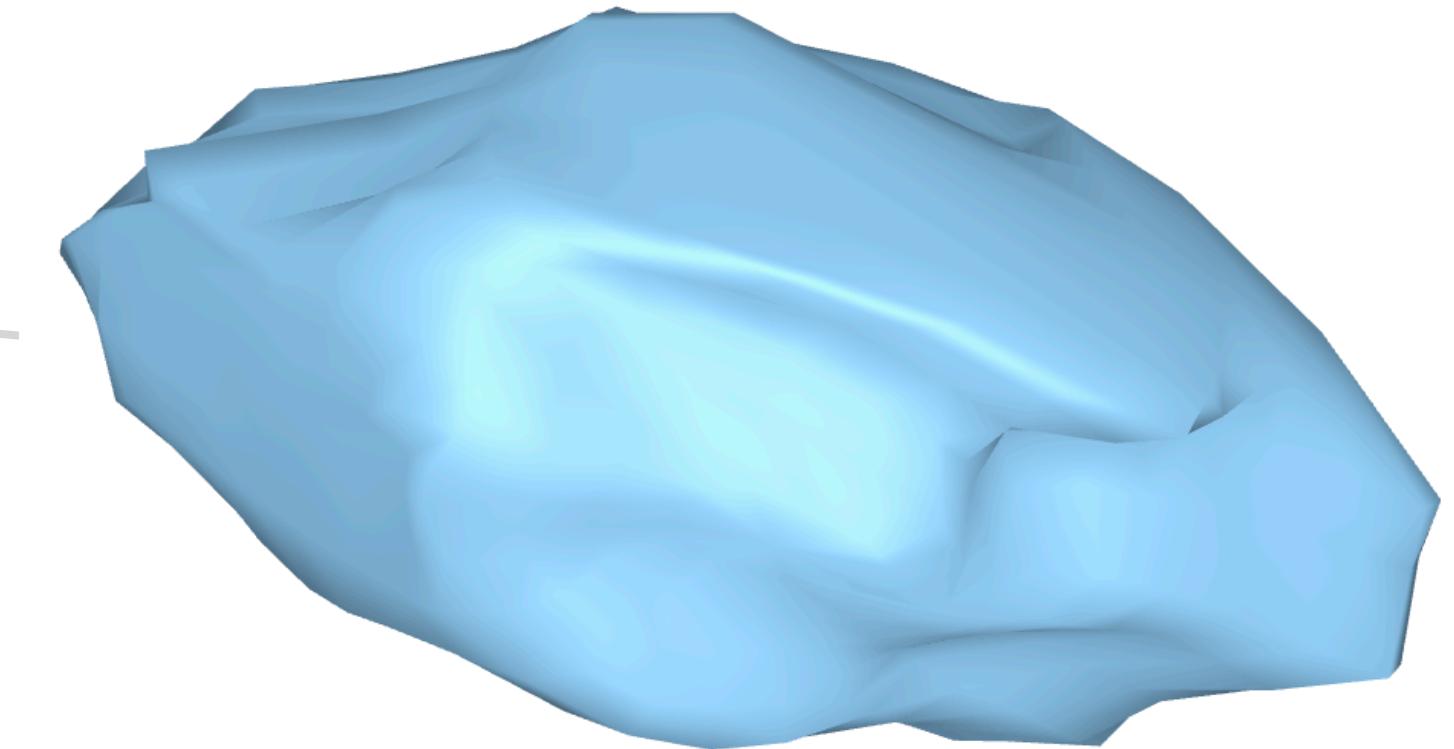

# One object = One asset

A piece of stone

**HASH ID**

# Applications

## Precious Gemstones

- Non-fungible tokens
- Fungible tokens

## Art

- Non-fungible tokens

## Real estate

- Non-fungible tokens
- Fungible tokens

## Piece of music

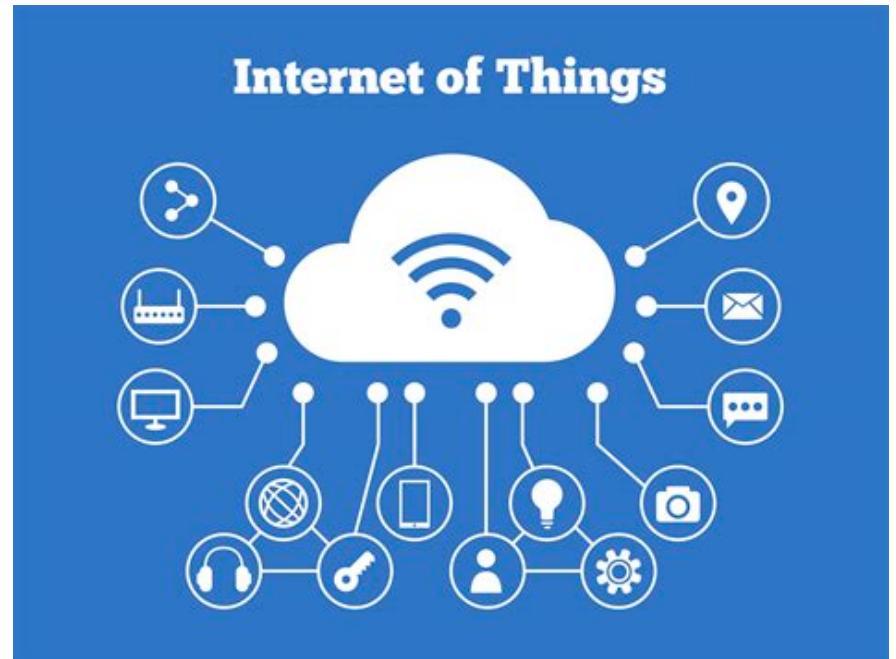

- Non-fungible tokens

## Metaverse and Gaming

- Non-fungible tokens
- Fungible tokens

## IoT

## E-commerce (AR)

- Non-fungible tokens

- Non-fungible tokens
- Fungible tokens

# Features & Customers

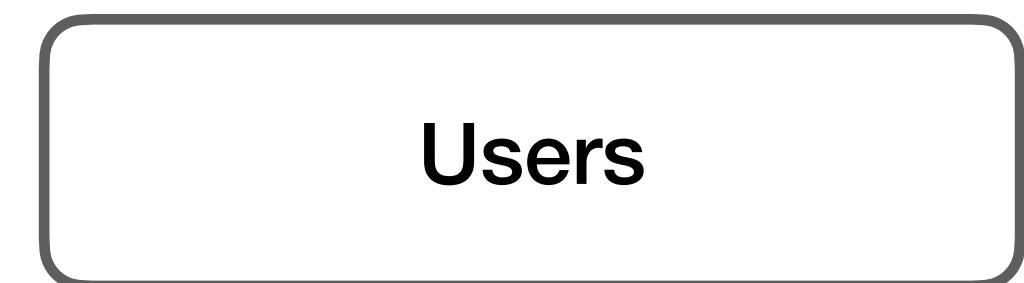

Features:

- 1. Recognition (1 object = 1 asset proof)**
2. Smart contracts
3. Atomic swap
4. Multisig accounts
5. Tokens issuing (fungible and non-fungible)
6. On-chain transaction storage
7. Off-chain storage
8. Decentralization
9. Community supported
10. Fair launch

In order to encourage people to maintain the network there is a minable cryptocurrency [3DPass coin](#)  
Economic model: Asset validation fee

Customers:

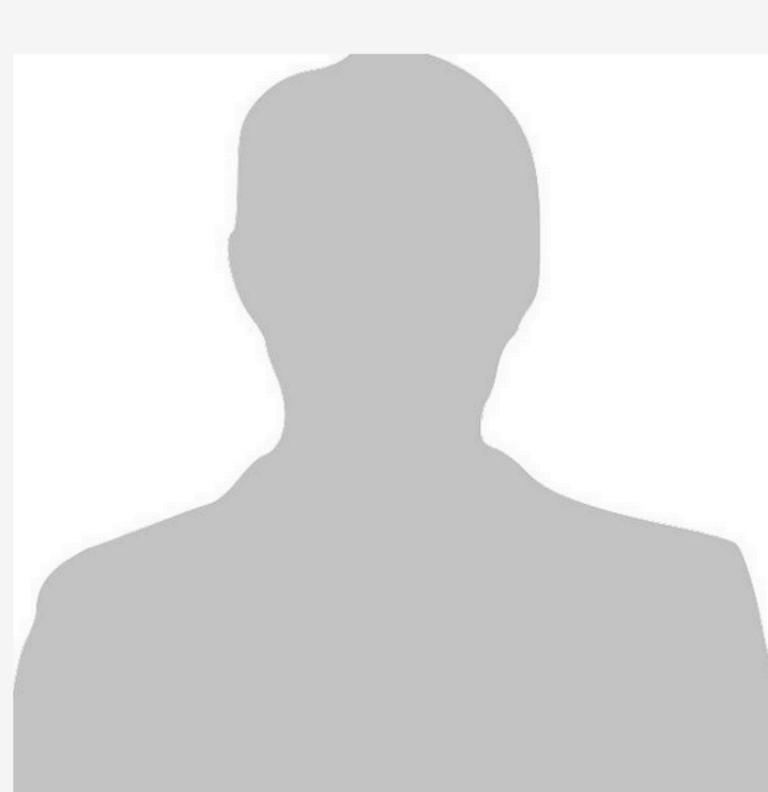

End users

Developers  
and businesses

Open source  
community

# Team

**PaulS**

**Inventor and founder**

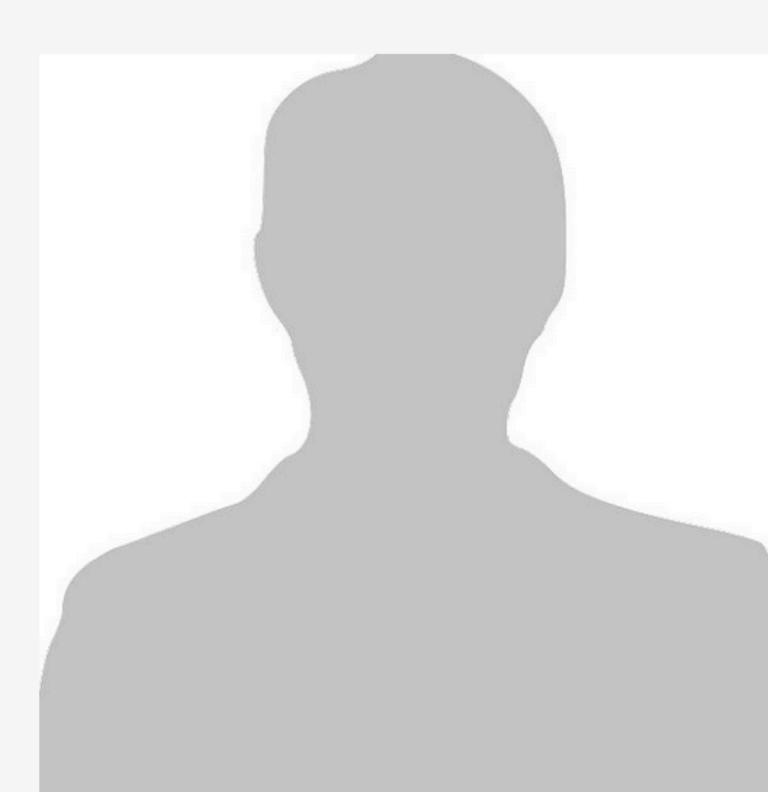

Several exits, 16+ years experience

**Michael Co**

**CORE developer and co-founder**

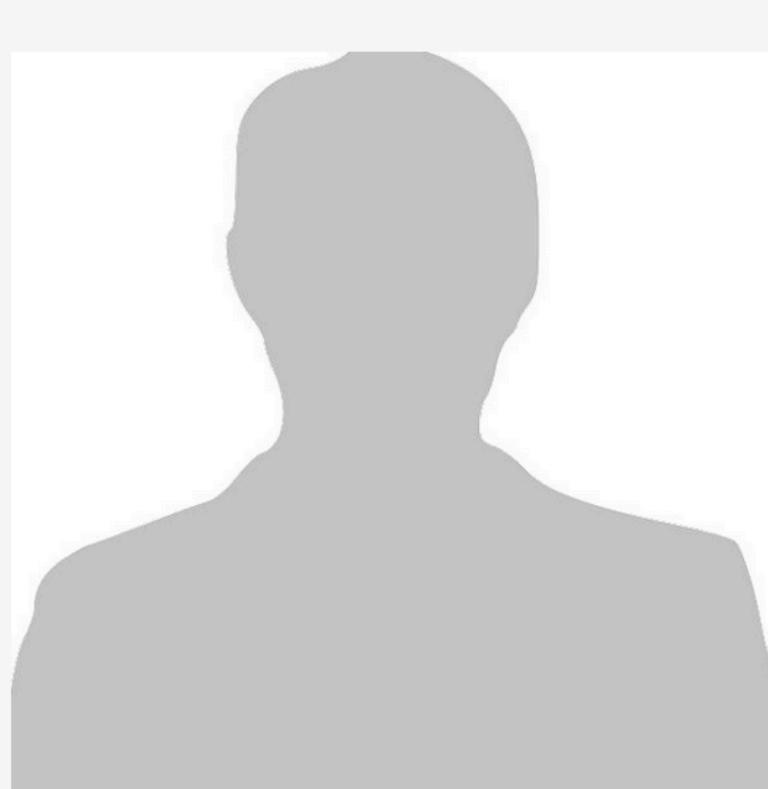

10+ years experience

**tvc.Micle**

**Front-end developer and co-founder**

10+ years experience

**L3odr0id**

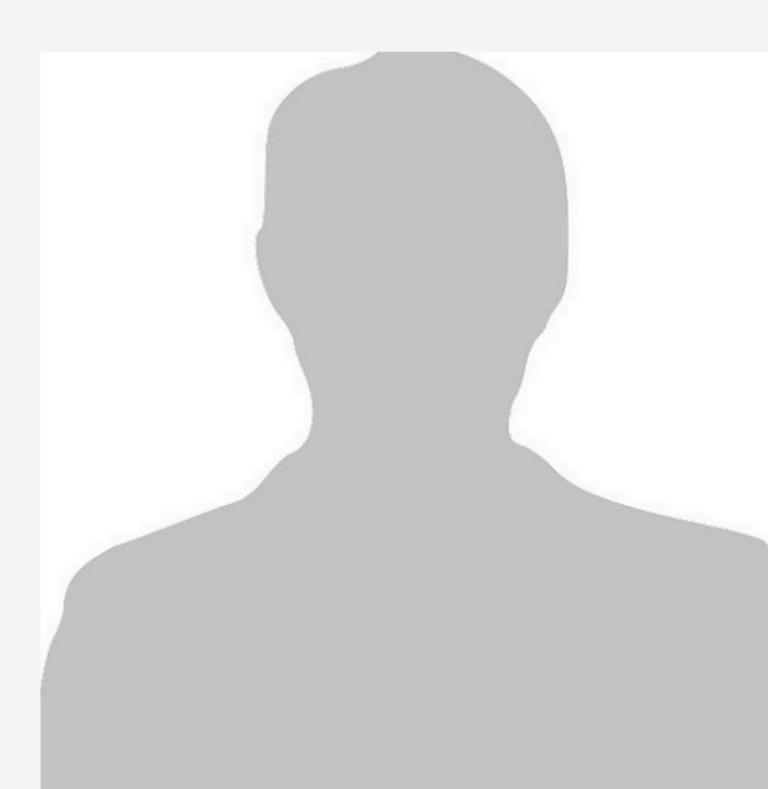

**Mobile developer**

**Andrew Coleman**

**Partner relations**
